Climate Action Plans and Public Health

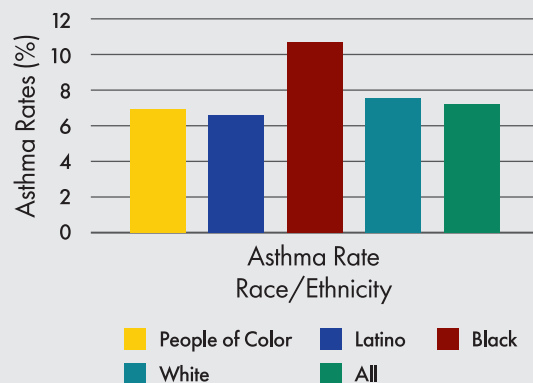

The City of San Antonio and Alamo Area Council of Governments (AACOG) are working to reduce greenhouse gas (GHG) emissions and to improve our region's climate sustainability and resilience.

16% of Bexar County adults
in 2021 reported
having asthma.

Among Bexar County's pediatric population, male children are hospitalized for asthma at higher rates than female children.

In Bexar County, Non-Hispanic Blacks continue to experience a higher rate of asthma hospitalization in comparison to Non-Hispanic Whites and Hispanic/Latinos.

High temperatures directly affect air quality, increase heat related illnesses that can be fatal, especially children and seniors.

San Antonio experienced:

75 days over 100 degrees
in 2023

59 days over 100 degrees
in 2009

Pathway to Public Health

The Alamo Area Climate Plan and City of San Antonio's SA Climate Ready Plan aim to reduce greenhouse gas (GHG) emissions while enhancing community health and environmental benefits.

Key strategies include reducing vehicle miles traveled, promoting solar energy, improving energy efficiency in buildings, and encouraging electric vehicle use. These actions target harmful pollutants like particulate matter, ozone precursors, and air toxics, which are linked to health issues such as asthma and heart disease.

By integrating GHG reduction with air quality improvement, these plans offer a comprehensive approach to addressing climate change and fostering overall well-being in the San Antonio community.

How Can You Help Take Action?

To create a comprehensive and meaningful climate plan, we need your ideas! Share your thoughts on how we can reduce greenhouse gas emissions and improve our community. Whether it's planting trees to combat the heat island effect, improving public transit, or reducing waste, we want to hear from you!

Please scan the QR code or visit our website www.AlamoAreaClimatePlan.com to see the plan's progress and submit your ideas.
