Climate Action Plans and Public Health

The City of San Antonio and Alamo Area Council of Governments (AACOG) are working to reduce greenhouse gas (GHG) emissions and to improve our region's climate sustainability and resilience.

A PARTNERSHIP BETWEEN THE CITY OF SAN ANTONIO
AND THE ALAMO AREA COUNCIL OF GOVERNMENTS

Climate + You

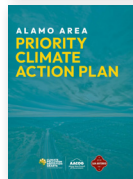

Not all community members contribute equally to climate change, nor do they all have the same resources to protect themselves from its effects.

Climate equity ensures that communities most affected have a leading role in transforming the systems that create and sustain unequal climate impacts.

Pathway to Climate Planning & Climate Equity

The Alamo Area Climate Plan and the City of San Antonio's SA Climate Ready Plan provide a roadmap to reduce greenhouse gas emissions. These plans focus on climate equity by prioritizing communities most impacted by climate change, those contributing the least to it, and those most socially vulnerable.

Key strategies include promoting solar energy, electrifying and increasing energy efficiency in homes and businesses, encouraging electric vehicle use, and expanding accessible transit options for underserved communities. By focusing efforts where they're needed most, these plans aim to improve economic, social, and public health conditions, especially for historically underserved areas.

How Can You Help Take Action?

To create a comprehensive and meaningful climate plan, we need your ideas! Share your thoughts on how we can reduce greenhouse gas emissions and improve our community. Whether it's planting trees to combat the heat island effect, improving public transit, or reducing waste, we want to hear from you!

Please scan the QR code or visit our website www.AlamoAreaClimatePlan.com to see the plan's progress and submit your ideas.
